

LED Walls and Controller: EYE-LED Seriesjkj

Quality at the highest level is essential for advanced multimedia large screen presentation outdoors, in railway stations and airports, or pop concerts or shows. Especially bright light conditions in stadiums require a bright medium with strong light, since this is the only way to produce an acceptable picture quality, for example, for replays in slow-motion or analyses of scenes from the game. LED walls from eyevis are the perfect solution for the representation of high-resolution computer graphics and live video sources. Since eyevis uses only top quality components, the advantages are obvious: low repair and maintenance costs, long life-time and reliability, optimal colour reproduction, precise light transmission and a high degree of brightness makes eyevis LED walls a first choice in presentation technology.

A further advantage of this comfortable, modular and highly versatile system: the LED walls can be hung or wall mounted since no additional frames or brackets are required.

The LED modules can even be used to built up rounded video walls. Installation and maintenance can be done within short time since the individual modules can be simply exchanged without demounting the entire system.

The advantages of the eyevis LED technology

- Low maintenance costs
- Long life-time
- Perfect colour representation
- Precise light transmission
- High brightness even outdoors

Application Possibilities

- Advertising
- Information
- Broadcasting
- Events
- Entertainment
- Sports
- Stadiums and arenas, indoors and outdoors
